

Everything You Need to Ace Math in One Big Fat Notebook

“Chapter 41 Angles”

By: Altair Peterson et al.
Workman Publishing, 2016
pp. 267-276

Written by: Brooke Gatley
Sam Houston State University

From a student, for the students, the book *“Everything You Need To Ace Math In One Big Fat Notebook”* is an excellent resource for almost any math question you can come up with. Chapter 41 of the book focuses on angles; in fact, it covers key vocabulary and concepts with colorful diagrams to support the text information in a way unusual to most textbooks. This book is chock full of vivid examples, with a handwritten font type and faux notebook paper theme that make the chapters fun and relatable for the reader. The overarching concept of the chapter is the varied types of angles, and it covers everything from acute, right, and obtuse angles to congruent, vertical, and adjacent angles. The end of the chapter even includes a ten question review guide, with the answers provided so you are able to check your work. This book has earned five out of five stars for its creative take on normally boring textbook information.

Biography

Brooke Gatley, a student at Sam Houston State University, grew up in San Antonio, Texas. She is majoring in Interdisciplinary Studies, with a minor in 4-8 Mathematics. She values the connection between literacy and mathematics and is excited to find effective ways to integrate the two subjects. She can be reached at beg013@shsu.edu.
